

Frogspawn

Tadpoles

AFTER ABSORBING THE YOLK FROM ITS EGG
THE TADPOLES BECOME STRONG ENOUGH
TO SWIM ON THEIR OWN. THEY THEN SPEND
ALL OF THEIR TIME EATING AND GROWING.

Adult Frog

Male & Female Adult Frogs Mate

THE MALE FROG ATTACHES HIMSELF TO
THE FEMALE WHERE HE STAYS UNTIL SHE
LAYS HER EGGS. HE FERTILIZES THEM AS
SHE LAYS THEM.

Tadpole

Tadpole with 2 legs

AS THE TADPOLE DEVELOPS IT GROWS ITS HIND LIMBS FIRST.

Tadpole with 4 legs

ONCE THEY GROW FRONT LEGS THEIR TAIL STARTS TO SHRINK AND SKIN FORMS OVER THEIR GILLS. ONCE THE TAIL DISAPPEARS THE TADPOLE LOOKS MUCH MORE LIKE A FROG.

Froglet
